

Basic Searching in Embase®

Embase is a biomedical and pharmaceutical database, which is particularly useful when you need to conduct a systematic review or search for topics on food/diet/nutrition, medical devices, or drugs. Embase contains all of **MEDLINE's** citations, and many more additional unique citations.

Accessing the Database

1. Go to the **Hardin Library homepage** at <http://www.lib.uiowa.edu/hardin/>
2. Click on the link that says “**Embase.**” It is located under the heading “**Popular Resources.**”
3. If you are off-campus, you will be prompted for your **HawkID** and **password**.

Basic Searching Using the Quick Search Box

1. Identify the main concepts in your research question, so you can search for each concept separately. For example, a search about the effects of aspirin on heart attacks has two concepts -- “aspirin” and “heart attack”.
2. Type your first concept in the Quick Search box on the homepage. Be sure to type slowly enough to let the database map your concept to the best Emtree term. Emtree terms are Embase's controlled vocabulary, which are used to assign subject terms to articles. **The mapping feature offered by the Quick Search box helps you get the most inclusive results.**
3. When you see the mapped term that best matches your concept, stop typing and click on the mapped term.
4. Click on the Show xxxx results button and you will be taken to the Results page.

5. To continue searching for additional concepts, click the Embase logo at the top left of the Results page to return to the Quick Search box. **Important: the Search box on the top of the Results page and the Quick Search box may look alike, but they are not the same.**

6. Repeat Steps 2, 3 and 4 for additional concepts.

7. On the top of Results page, you can find your search History. Notice how Embase has searched your terms. For each term, it searches the concept as an Emtree term (i.e. 'heart infarction'/exp) and as a text word from the titles and abstracts of articles. The "/exp" indicates that it's an "explosion" in Emtree, meaning this search not only looks for the subject term you selected (i.e. heart infarction) but also many related subjects (i.e. acute heart infarction, heart ventricle infarction, etc).

<input type="checkbox"/> History	Save Delete Print view Export Email	Combine >	using <input checked="" type="radio"/> And <input type="radio"/> Or	^ Collapse
<input type="checkbox"/> #2	'acetylsalicylic acid'/exp OR 'acetylsalicylic acid'			186,650
<input type="checkbox"/> #1	'heart infarction'/exp OR 'heart infarction'			331,402

8. Finally, combine your searches by checking the boxes to the left of each search and then clicking the Combine button. Be sure to select AND or OR, depending on your search.

Refining Your Search

1. On the Results page, there are several options in the gray bar beneath the search box. For example, if you click on **Quick limits**, you will have the options to limit your search to Human subjects and English language.

2. There are also several options in the left side-bar of the Results page. For example, you can see how many citations there are in the most recent search in various subsets, e.g. age, gender, drugs used, and other diseases.

The screenshot shows the Embase search interface. At the top, there is a search bar with the query "'acetylsalicylic acid'/exp OR 'acetylsalicylic acid'". Below the search bar is a navigation bar with options: Mapping, Date, Sources, Fields, Quick limits, EBM, Pub types, Languages, Gender, Age, and Animal. A red arrow points to the 'Quick limits' option. Below the navigation bar is a 'Results Filters' section with a list of filters: Sources, Drugs, Diseases, Devices, Floating Subheadings, Age, and Gender. A red arrow points to the 'Results Filters' section. To the right of the filters is a 'History' section with a table of search history. A red arrow points to the 'History' section. Below the history is a 'Results' section with a table of search results. A red arrow points to the 'Results' section. The first result is 'Endovascular thrombectomy and post-procedural headache' by Khan S, Amin F.M., Holtmannspötter M., Hansen K., Florescu A.M., Falch A., Lin Z., Petersen J.F., Ghanizadeh A. (2017). The journal title is 'Journal of Headache and Pain'. A red arrow points to the 'UILink' button next to the result.

Exporting, Printing, and Saving References

1. Check the boxes to the left of references of interest.
2. Click on the "Print", "Export", or "Email" link (found at either the top or the bottom of the search results) and follow the prompts.
3. For EndNote Desktop, make sure the Export Format is RIS format (Reference Manager, ProCite, EndNote)". For EndNote Web (Basic), make sure the Export Format is Plain Text and Output is Full record. When in EndNote Web (Basic), make sure the Import Option is EMBASE.com.

Finding Full Text

1. To see if full text is available, use the UILink button,  located below the article title, authors, and journal title.
2. If no full text is available, use our free interlibrary loan service <http://www.lib.uiowa.edu/hardin/illa/>
